

# REGUPOL 4515 ACOUSTIC TILING SYSTEM

## REGUPOL LAUNCHES FIRST GUARANTEED DEEMED-TO-SATISFY BCA TILING SYSTEM

The advanced acoustic technology in the new 4515 direct-stick acoustic tiling system, developed by Regupol, BSW and Morgan Adhesives, complies with BCA requirements. Easy to install (below), the Regupol 4515 system gives acoustic engineers the confidence to specify hard floor surfaces.

Regupol (Australia) Pty Ltd is set to restore market confidence in specifying tiled surface finishes, with the launch of a new Regupol 4515 direct-stick acoustic tiling system.

Extensive independent testing of the new Regupol 4515 direct-stick tiling system – developed in collaboration with Regupol, BSW and Morgan Adhesives (the manufacturer of market-leading Resinflex One Pack acoustic tile adhesive) – has demonstrated that it meets and complies with the BCA Part F.5 regulations as a deemed-to-satisfy provision or alternative solution. It is guaranteed by independent testing to ISO 140-6-1998 and rated in accordance with AS/NZS 717.2-2004, a requirement under the BCA Part F.2.

Each component of the Regupol 4515 direct-stick tile system was formulated using advanced acoustic technology and is exclusive to Regupol Australia. The Regupol 4515 underlay is unlike in situ or trowel-on systems available – it delivers consistent thickness, density and impact isolation at source.

Kelly Mahon, Regupol’s managing director, says: “Post Part F.5 of the BCA there’s been a noticeable resistance to using a hard floor finish because of fears that it will fail acoustic testing. By developing the new Regupol 4515 direct-stick tiling system, we’re giving developers back the choice to use the finish they want, and the confidence that it is an acoustically sound solution. Our extensive independent testing gives acoustic engineers the guaranteed results they are looking for, and architects the confidence to specify a warranted system. I am unaware of any other system on the market that can provide such certificates or guarantees.”

Bevan Morgan, managing director of Morgan Adhesives, explains: “Resinflex One Pack has been developed to achieve excellent adhesion to Regupol 4515 acoustic matting without adversely affecting the acoustic performance of the floor. It outperforms other tile adhesives due to its formulation, which contains similar fillers to the materials used in the Regupol 4515 matting, thus the combined system is environmentally friendly and extremely lightweight. I am extremely confident that this will be a popular system, which shows Morgan Adhesives’ innovation at its strongest.”

Regupol Australia offers a complete project specification service for any project and welcomes the opportunity to service their industry colleagues.
